- ☐ Smart Automation Solutions
- ☐ Security Surveillance Systems
- ☐ Parking Management Systems
- ☐ Audio and Video Solutions
- ☐ IoT Solutions
- ☐ Engineering Division

Engineering Services

Partnered to ULCCS (ULCC Limited)

U-SPHERE
Towards Integrated Future
A ULCCS INITIATIVE

Our Engineering Division delivers complete technical solutions that turn complex ideas into safe, sustainable, and fully functional infrastructure. We combine innovative engineering approaches with strict safety and quality standards to ensure every project is delivered efficiently, within budget, and to the highest level of reliability.

Our expertise covers structural consultancy and design, including detailed planning for foundations, steel structures, and concrete works. We also conduct site engineering and feasibility studies, such as soil testing and site assessments, to confirm project viability from the outset.

From planning to execution, we manage project scheduling and coordination to ensure smooth delivery across timelines and budgets. We also design and support temporary structures to maintain safety throughout construction phases.

Quality and compliance remain at the core of everything we do, with strict adherence to relevant regulations and standards. In parallel, we ensure careful material selection and testing so that every component used meets required performance and durability benchmarks.

In essence, our Engineering Division plays a key role in delivering dependable, compliant, and high-quality infrastructure from concept through to completion.

CEENEX GLOBAL – CANADA, UAE, KSA, INDIA

Target Market and Business Verticals
